Center for Material Cycles and Waste Management Research &
Japan Environment and Children's Study (Jecs) Programme Office

Dr. Hidetaka Takigami (1970-2015)

Dr. Hidetaka Takigami sadly passed away last July.

He was the outstanding researcher for POPs and related compounds in the field of waste management and recycling.

He led our research group and obtained also important outcomes with CALUX assays.

He applied CALUX assays to the environment and emission source monitoring to identify and control the pollutants such as dioxins, dioxin-like compounds and endocrine disrupting compounds.

The official approval and use of the dioxin bioassay in Japan

Ministry of the Environment, Japan

In 2005 in Japan, the Government allowed the use of bioassay methods including DR-CALUX assay, which gave acceptable results through official evaluation, for measuring dioxins in emission gas from small scale waste incinerators and incineration ash from all the waste incinerators.

Nakano, T., Muroyoshi, H., Takigami, H., Sakai, S., Morita, M. et al.

Topics for presentation

Current status for the official approval and use of the dioxin bioassays in Japan

Recent research with the dioxin bioassay

Current status for the official approval and use of the dioxin bioassays in Japan

Dioxin emissions and environmental levels in Japan

Enforcement of the Act on Special Measures concerning Countermeasures against Dioxins

Regulations for Dioxins in emission gas

Type of Facilities		Flue Gas Emission limits (ng WHO-TEQ/m ³ N)		Ash Treatment Standards (ng WHO-TEQ/g)
		New Facility	Existing Facility	
Waste incinerators	4 ton/h <	0.1	1	3
	2 – 4 ton/h	1	5	3
	< 2 ton/h	5	10	3
Sintering facilities for steel industry		0.1	1	-
Electric steel-making furnaces		0.5	5	-
Facilities for collecting zinc		1	10	-
Facilities for manufacturing aluminum base alloy		1	5	-

Obligation to monitor dioxins

Business entities which own and manage specified emission sources such as an incinerator are also **obligated** under the law **to measure dioxins emission** at least once a year.

Measurement of dioxins

GC-HRMS

Selective, accurate and precise method
but a high cost of the instrument and maintenance

→ ¥150,000 (€1,200) / 1 sample

In vitro bioassay detecting dioxins

High-throughput and cost-effective method
but no information about isomers

→ ¥30,000 (€240) / 1 sample

Procedure for measurement of dioxins established in 2004

排出ガス、ばいじん及び燃え殻の
ダイオキシン類に係る簡易測定法マニュアル
(生物検定法)

Procedure for measurement of dioxins
in incinerator flue gas, fly ash and
bottom ash
(*In vitro* bioassays)

Revised in March 2009
(Established in September 2004)

Approved by Japanese Ministry
of Environment

Measurement of dioxins by *in vitro* bioassays for incinerator flue gas, fly ash and bottom ash

Flue gas

Fly ash

Bottom ash

➔ More than 4,000 samples per year for *in vitro* bioassay

In vitro bioassays selected by Japanese MOE

1. AhR-binding assay

➔ AhR reporter gene assay

➔ Polyclonal anti-body based immunoassay

2. Monoclonal anti-body based immunoassay

In vitro bioassays selected by Japanese MOE

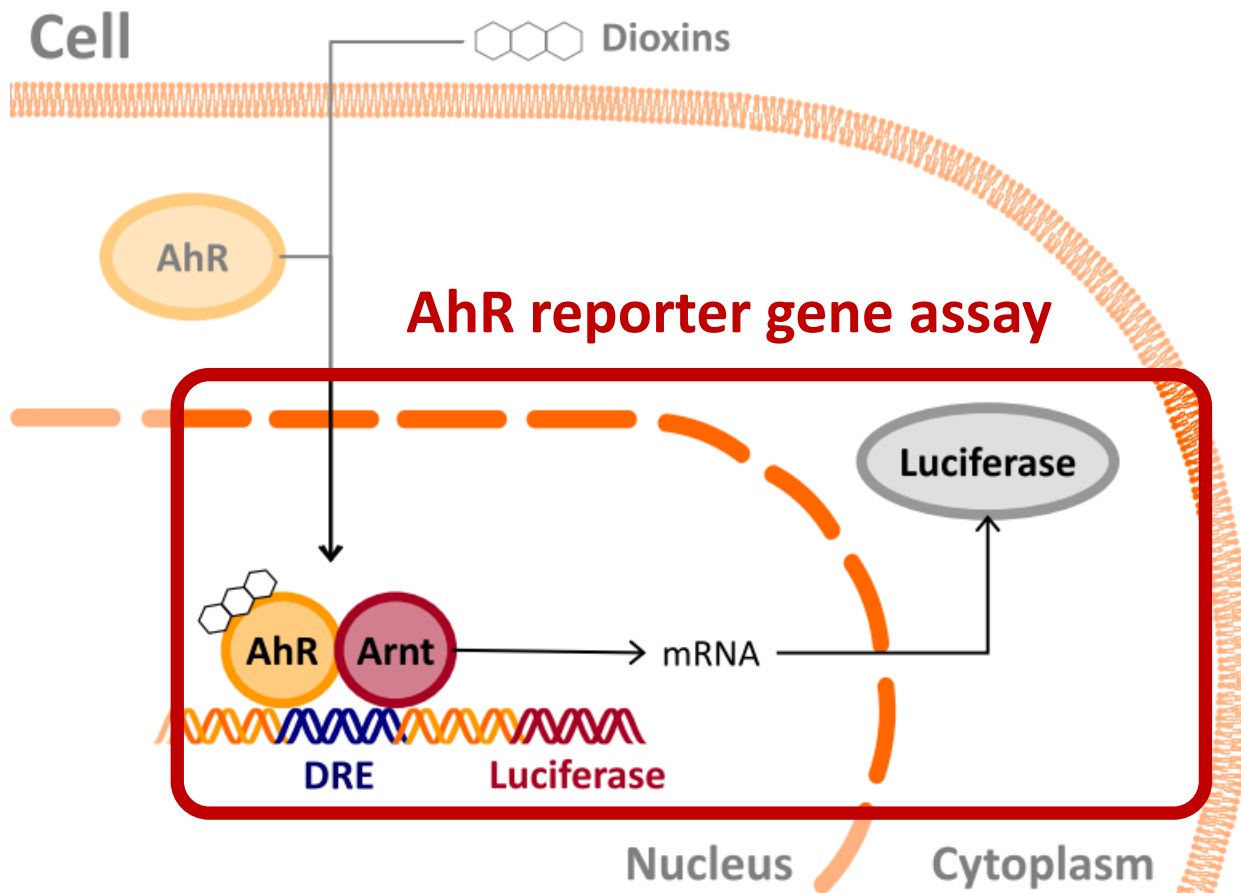

1. AhR-binding assay

AhR activation leads to toxic effects of dioxins

In vitro bioassays selected by Japanese MOE

1. AhR-binding assay

In vitro bioassays selected by Japanese MOE

1. AhR-binding assay

In vitro bioassays selected by Japanese MOE

2. Monoclonal antibody based immunoassay

Importance of clean-up process for the dioxin bioassay

- ➔ To remove labile AhR ligands such as PAHs
- ➔ To extract dioxins from sample matrix without internal standards

Frequency distribution of *in vitro* bioassay data obtained in the interlaboratory calibration study

Phase I samples: Standard mixtures (PCDD/DFs, DL-PCBs)

Phase II samples: Clean-up extracts (sediment, food/feed)

Phase III samples: Original samples (3 fish oil, 3 feedstuff)

Phase III-11 Phase III-12 Phase III-13 Phase III-14 Phase III-15 Phase III-16

➔ Simple clean-up method with high recover rates of dioxins is an important for the detection of dioxins with *in vitro* bioassay!

In vitro bioassays combined with clean-up approved by Japanese Ministry of the Environment

1. AhR-binding assay

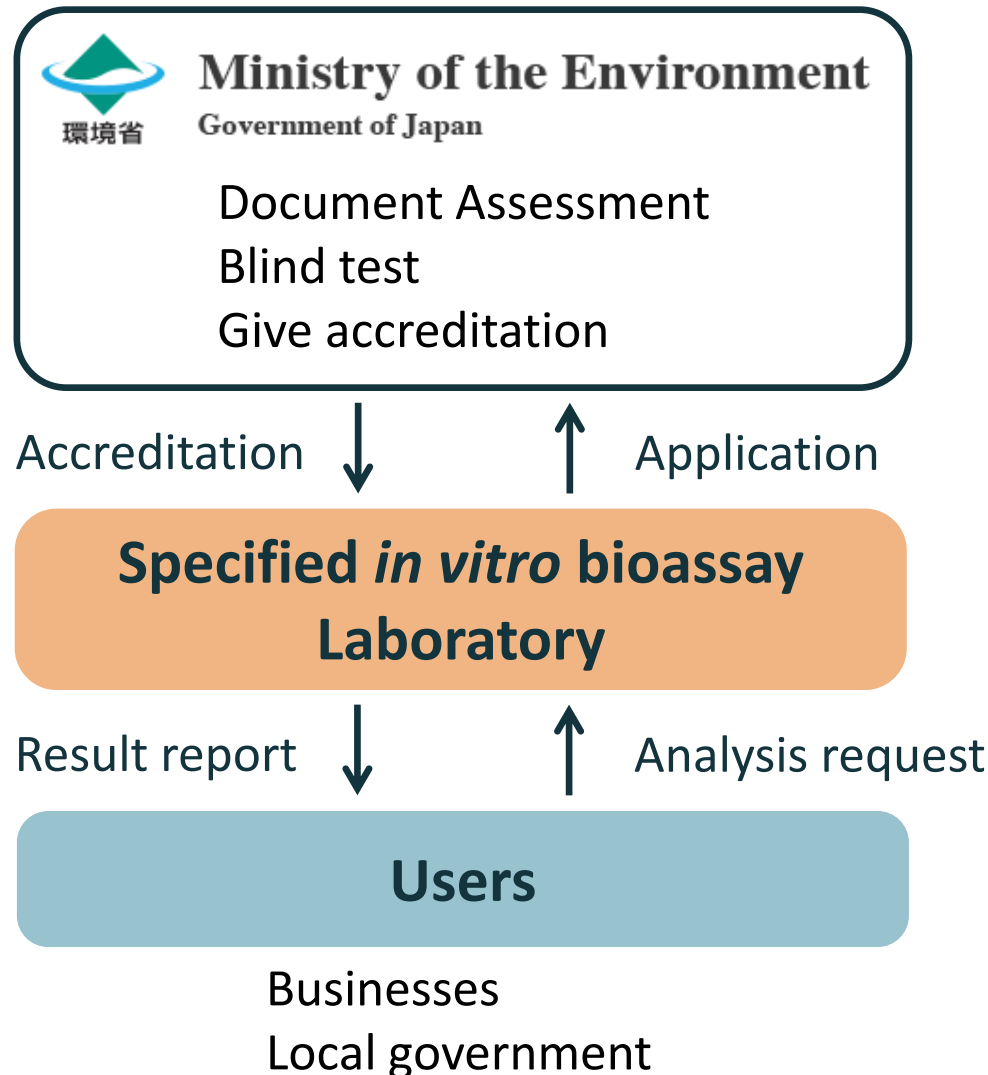

No.	Categories	Clean-up methods	Detection
1-1	AhR reporter gene assay	Sulfuric acid silicagel column + Carbon column	XDS-CALUX assay with mouse H1L6.1c2
1-2		Sulfuric acid silicagel column + Carbon column	P450 HRGS assay with human 101L
1-3		Multilayer silicagel column	Ah-luciferase assay with mouse HeB5
1-4		Sulfuric acid silicagel reflux treatment	DR-CALUX assay with rat H4IIE-luc
1-5		Multilayer silicagel column + Aluminum column	DR-EcoScreen assay with mouse hepatoma cell
1-6	Polyclonal antibody based immunoassay	Sulfuric acid + Multilayer silicagel column	Anti-Arnt polyclonal antibody Ah immunoassay

In vitro bioassays combined with clean-up approved by Japanese Ministry of the Environment

2. Immunoassay

No.	Categories	Clean-up methods	Detection
2-1	Monoclonal antibody based immunoassay	Multilayer silicagel column + carbon column	Anti-dioxin monoclonal antibody (specific to 2,3,7,8-substituted PeCDFs) Dio-quicker
2-2		Multilayer silicagel column + Carbon column	Anti-dioxin monoclonal antibody (specific to 2,3,7,8-substituted Pe&HxCDD/Fs) EA-Test for dioxins
2-3		Multilayer silicagel column + Aluminum column	Anti-dioxin monoclonal antibody (specific to ?) Dioxin ELISA kit TK
2-4		Multilayer silicagel column + Aluminum column	Anti-dioxin monoclonal antibody (specific to 2,3,4,7,8-PeCDF) KinExA®

Scheme of the accreditation for *in vitro* bioassay-laboratory in Japan (Since 2006)

Recent research with the dioxin bioassay

Review

Brominated flame retardants and the formation of dioxins and furans in fires and combustion

Mengmei Zhang^a, Alfons Buekens^{a,b}, Xiaodong Li^{a,*}

^a State key laboratory of clean energy utilisation, Institute for Thermal Power Engineering, Zhejiang University, Hangzhou, China

^b Formerly with Chemical Engineering department, Vrije Universiteit Brussel, Brussels, Belgium

H I G H L I G H T S

- BFRs (PBDEs, HBCD and TBBP-A) are the main sources of PBDD/Fs in combustion process.
- Precursor formation is the most relevant pathway for PBDD/Fs formation.
- Adding bromine into combustion system can enhance the formation of PCDD/Fs.
- Primitive recycling of e-waste produces the largest amounts of PBDD/Fs.

Zhang et al. *J Hazard Mater* 2016

BFRs have been widely used in products in the world

Electronic

Car fabric

Compounds	Annual Sales (t)			
	2010	2011	2012	2013
Brominated flame retardants	430,000	444,600	429,500	434,000
Phosphorus flame retardants	188,000	190,000	187,000	190,000
Inorganic based-flame retardants	528,730	538,300	551,900	565,500

Results of application study with developed method

Samples	Sampling year	Regulation WHO-TEQ	Origin and average CALUX-TEQ ratio from Br-DXN fraction of samples exceeding regulation
Flue gas (<i>n</i> =50)	2014-2015	10 ng/m ³ N	Electronic manufacture, 90% (<i>n</i> =2)
Fly ash (<i>n</i> =22)	2014-2015	3 ng/g	Domestic waste disposal business, 9.5% (<i>n</i> =2) Industrial waste disposal business, 8.4% (<i>n</i> =3)
Bottom ash (<i>n</i> =19)	2014-2015	3 ng/g	Domestic waste disposal business, 21% (<i>n</i> =1) Construction industry, 15% (<i>n</i> =1)
Waste water (<i>n</i> =25)	2014-2016	10 pg/L	Flame-retarded textile factory, 67% (<i>n</i> =6) STP influent, 60% (<i>n</i> =2) Incinerator, 35% (<i>n</i> =5)
Soil (<i>n</i> =128)	2012-2014	1000 pg/g	E-waste open-burning area, 39% (<i>n</i> =9)
Sediment (<i>n</i> =35)	2004-2014	150 pg/g	E-waste processing area, 21% (<i>n</i> =7) Harbor, 10% (<i>n</i> =2)
Indoor air (<i>n</i> =18)	2014-2015	2.5 pg/m ³	Not detected
House dust (<i>n</i> =44)	2007-2008	(100 pg/g)	Hotel, 53% (<i>n</i> =3) Office, 43% (<i>n</i> =12) Household, 41% (<i>n</i> =2) Nursery school, 28% (<i>n</i> =3)

➔ Brominated dioxins tended to be detected in samples related with brominated flame retardants (BFRs)

BFRs tend to be used in many kinds of household products

Betts Environ Health Perspect 2008

- ➔ Brominated dioxins should be managed for environmentally sound management of BFR-containing product
- ➔ Developed method will be useful screening tool for brominated dioxins

Thank you very much for kind attention!
